

Heycoach!!

Release Update

2.20 to 2.22

A few minor bugs detected since the release of 2.20 have been corrected and the additions or modifications to the system are as follows

1. **Schedule generation** now has a flag which when set will prevent the schedule from creating two games for one team on any one day. This will effect the rotation of the teams through the game slots.
2. **Custom Statistics.** You can now create your own statistics such as Tape to tape passes or Hits. There can be a maximum of 50 statistics each with 20 elements per statistic per sport. These statistics can be created and deleted (along with the entered data) at any time making it ideal for tracking both permanent and temporary statistics.
3. **Custom Reports** now allows for calculated values as well as the custom statistics within it's field selections

If you have any questions about or problems with the release contact us either by email at support@heycoachsoftware.com or phone 416-449-4495 ext 350 during office hours EST.
