

Heycoach!!

Release Update

2.26 to 2.30

This upgrade is aimed at improving the communications between yourself and the players in your system and in the registration areas.

2.30 is the first release for the 2003/2004 season so it will require re-registration for those of you upgrading from 2.26 or an earlier release.

1. **Mass email and merge file** generation capabilities have been added for both contacts and players. You can select the recipients of the emails in numerous ways and the email generated can be in a "form email" where standard fields in the form are replaced by the recipient's own information thereby personalizing each email.
2. **The search for players** has been expanded so you can now search for contacts as well. Similar selection criteria is used.
3. **Registration limits** per division can now be set and reports (and emails and mail merge files) can be generated as to who is accepted and who is waitlisted. This really simplifies the notification of the players of their status.
4. **Web Pages.** Additional reports and customization improvements have been made to the web pages that the system produces one of which is that Game Results page can now automatically link to individual game sheet pages (a new report). Colour customization has also been added
5. **FTP.** You will notice an additional button  on your print preview and webpage preview programs. When clicked the system will transfer your report to a predetermined URL (web page). This means that your website will immediately be updated with either the report (in PDF format) or web page (in HTML format). It's like printing straight to the web. Read up in the Help system as to the setup requirements.

If you have any questions or problems with the above please contact us on 416-587-1280 or at hutchy@heycoachsoftware.com
